ORACLE

JSR344 (JSF 2.2) Status Update to JCP EC 11 September 2012

Edward Burns @edburns JCP Spec Lead

The following is intended to outline our general product direction. It is intended for information purposes only, and may not be incorporated into any contract. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, and timing of any features or functionality described for Oracle's products remains at the sole discretion of Oracle.

My Plan For Your Time Investment

- JSR Summary and Scope
- Big Ticket Features
- Medium Sized Features
 - Bug Fixes

My Plan For Your Time Investment

Fransparenc

- How I run JSRs
 - What works Well, Puzzlers
- How features are suggested
- Transparency Tools
- Roadmap

What is JSF? Why is it Important? JSR Summary: Abstractions Endure

SINCE 2004, JSF HAS BEEN THE STANDARD WEB APP FRAMEWORK FOR THE JAVA PLATFORM. JSF WAS DESIGNED TO BE A UI COMPONENT FRAMEWORK THAT SEPARATES UI SEMANTICS FROM RENDERING.

JSR Scope

- "Bring the best ideas in web application development to the Java EE Platform"
 - Maximize Productivity
 - Minimize Complexity
- Categories listed on JSR
 - Ease of Development
 - New Features
 - Fixes

Six Big Ticket Features http://bit.ly/JCP_20120911_BIG_TICKET

- Faces Flows
- HTML5 Friendly Markup Support
 - Pass through attributes and elements
- Multi-Templating
- Cross Site Request Forgery Protection
- Loading Facelets via ResourceHandler
- File Upload Component

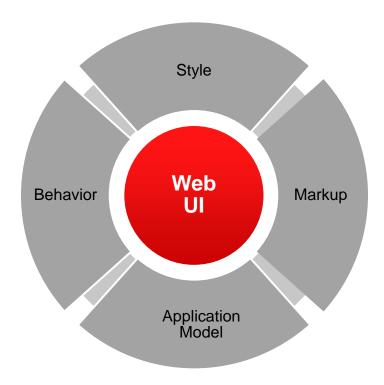

- Lack of formal way to group pages leads to maintenance problems
 - Hard to understand navigation
 - Like a large program that is a single function with lots of goto statements
- Faces Flows goals
 - Allow grouping related views together
 - Allow building applications as composites of modules of functionality

- JSF Navigation Story Recap
 - Defines a graph of VDL views
 - XML rule base defines relationship between views
 - Implicit rules added in JSF 2.0

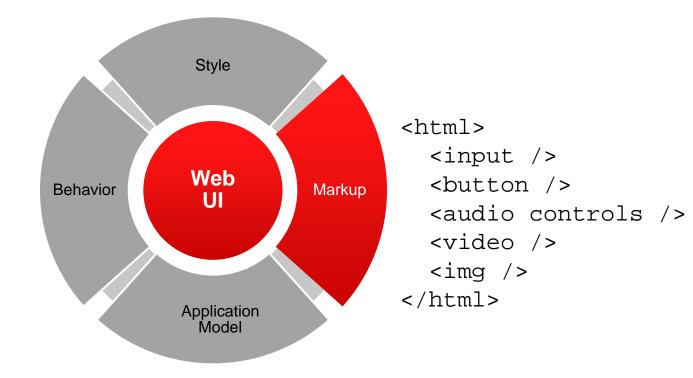

- Faces Flows builds on the existing JSF navigation story and adds
 - Several node types in addition to VDL views
 - Well defined start and end-node concept
 - Scope concept
 - Ability to package a flow as a module and enclose it in a selfconfiguring jar
- Still described in XML

- Two main varieties of flows
 - Unbounded (No specific start or end, not within a specific flow)
 - Bounded (with explicit start node and end node(s))

What's in an HTML5 UI?

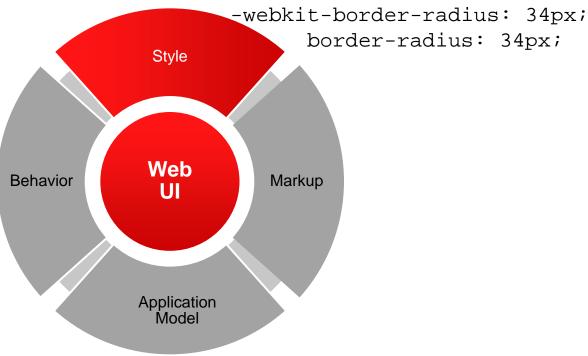

What's in an HTML5 UI?

What's in an HTML5 UI?

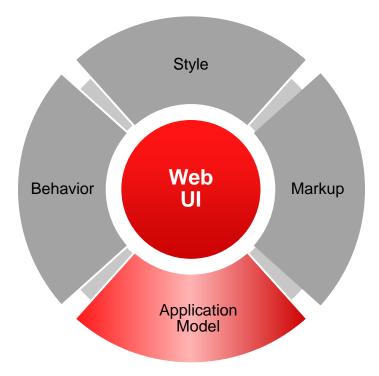

border:groove 5px #000000; -moz-border-radius: 34px;

What's in an HTML5 UI?

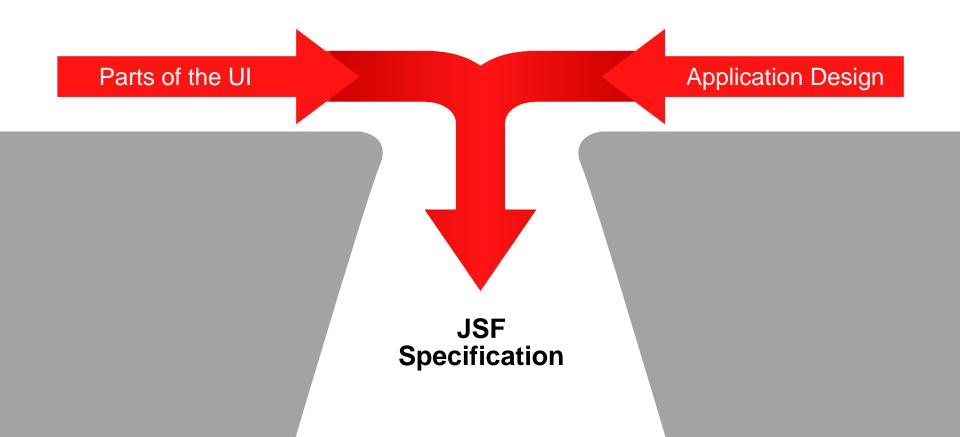

```
Style
navigator.geolocation.
  getCurrentPosition();
window.JSON;
window.WebSocket;
                                        Web
                           Behavior
                                                    Markup
                                         UI
                                       Application
                                         Model
```

What's in an HTML5 UI?

Significant Server Side Logic

Defining what goes where

The power is in the developer's hands

- Markup
 - JSF View Declaration Language
- Style and Behavior
 - JSF Resource Handler
- Application Model
 - The strength of Java EE

View Declaration Language

- An HTML-like syntax for declaring a user interface
- The ability to mix pure HTML with JSF components in the same declaration
 - Some of the elements in the declaration have a server-side representation: a UIComponent + Renderer pairing
 - The rest of the elements in the declaration are either for server-side templating or pure HTML

ORACLE

JSF 2.2 HTML5 Friendly Markup

Let the elegance of HTML shine through

```
<input type="tel" jsf:id="phone"</pre>
 jsf:value="#{bean.mobileNumber}" />
<input type="range" jsf:id="values"</pre>
 jsf:value="#{bean.value}" />
<button type="button" data-value="MyData"</pre>
 jsf:actionListener="#{bean.buttonClicked}"/>
oqress><h:outputText id="progress"</pre>
   value="#{bean.progress}"/></progress>
<h:inputText value="#{bean.input}">
  <f:passThroughAttribute name="data-value"
     value="#{bean.dataValue}" /></h:inputText>ORACLE
```

JSF 2.2 HTML5 Friendly Markup

Let the elegance of HTML shine through

- Before JSF 2.2
 - JSF tags hide complexity of underlying HTML+script+css+images
 - JSF "Renderer":
 - encode: markup to browser
 - decode: name=value from browser
- JSF 2.2
 - Pure HTML+script+css+images in the JSF page
 - JSF Renderer handles decode from browser
 - Leverage the strength of the JSF lifecycle
 - Leverage the expressiveness of HTML5

Style and Behavior

Leverage the JSF ResourceHandler

- To JSF, CSS and JavaScript are just another kind of resource delivered to the browser, along with the markup
- The JSF ResourceHandler lets you create libraries of localized resources and declare dependencies on them from your UI components.
- Want to use CSS3? Sure, go ahead!

Application Model

Where JSF has always shined

- Data Conversion
- Validation
- Database Integration (Persistence Layer)
- Security
- Expression Language
- Request Processing Lifecycle
- Event System

Other Big Ticket Features

- Multi-Templating
 - Multi Templating : Entire Application :: Facelets : Single Page
- Cross Site Request Forgery Protection
 - POST-back is a virtue. Add protection for GET-based requests
- Loading Facelets Via ResourceHandler
- File Upload Component
 - Because we can depend on Servlet 3.0!

28 Medium Sized Features http://bit.ly/JCP_20120911_MEDIUM

- Components/Renderers
 - Component Managed EL Context
 - Windowld
- Facelets
 - HTML5 DOCTYPE is the default
 - Programmatic Composite Component creation
 - FaceletFactory API
- Lifecycle
 - View Actions

28 Medium Sized Features http://bit.ly/JCP_20120911_MEDIUM

- Managed Beans
 - Everything is CDI injectable
 - CDI ViewScoped
- Resources
 - Relative ResourceHandler

44 Bug Fixes http://bit.ly/JCP_20120911_BUG_FIXES

- Components/Renderers
- Ajax
- Specification errors and clarifications
- EL
- Facelets
- Lifecycle
- Resources

JSR-344 IS NOW ON JCP 2.8

My Plan For Your Time Investment

- JSR Summary and Scope
- **Big Ticket Features**
- Medium Sized Features
 - **Bug Fixes**

My Plan For Your Time Investment

- How I run JSRs
 - What works Well, Puzzlers
- How features are suggested
- Transparency Tools
- Roadmap

How I run JSRs

- What works well
 - Spec lead drives all aspects of development, pulling expertise from EG for specific targeted questions.
 - Minimize time commitment from EG members by being very informal in what they put on the EG list.
 - Simple emails turn into formal feature requests
 - Discussion digressions generate new ideas
 - Public Issue Tracker
 - JSF has had one since 2004
 - Still a good idea

How I run JSRs

- What works well
 - What worked well in iteration N may not work at all in N+1
 - Example, JSR 314, JSF 2.0
 - Ajax sub-group
 - Composite component sub-group
 - JSR-344 JSF 2.2
 - Hard to get traction even on single-thread development effort

How I run JSRs

- Puzzlers
 - How to get more done by delegating to EG members?
 - Who has the time?
 - Does it really allow parallel work?
 - Things fall off a cliff.
 - How to stay on schedule?
 - JSR schedule stated PFD in Q4CY2011
 - Managing the tension between stated JSR goals and what seems important to the EG at any given moment
 - Inconsistently responsive EG
 - Inconsistently available Spec Lead

How New Features Are Suggested

- Held public vote at beginning of JSR
 - http://bit.ly/JCP-20120911_JSF_2_2_VOTES
- Public Issue Tracker
- Email from to EG List
- Need to fit into existing JSR charter
- Needs to fit into existing committed schedule

Tools

JSR Timeline

- JSR 127
 - JSF 1.0 11 March 2004
 - JSF 1.1 27 May 2004
- JSR 252
 - JSF 1.2 11 May 2006
 - JSF 1.2 Maintenance Release 1 19 December 2006
 - JSF 1.2 Maintenance Release 2 13 June 2008
 - JSF 1.2 Maintenance Release 3. 25 August 2008

- JSR 314
 - JSF 2.0 1 July 2009
 - JSF 2.1 16 July 2010
 - JSF 2.1 Maintenance Release 2 22 November 2010
- JSR 344
 - Started 14 April 2011
 - Early Draft Review released 8 December 2011
 - Working toward Public Review Draft

Achievements

- JSF 2.0 was the last BIG FEATURE release for JSF
- From now on, JSF will be maintained using smaller, more frequent releases.
 - JSF 2.1, released Q4 2010, JCP Minor Revision
 - JSF 2.2, slated for release in 2012, full JSR
 - Requires JavaEE 6, will release before JavaEE 7
 - JSF 2.3, will target JavaEE 7

Roadmap

- JSF 2.2
 - Public Review Draft by December 2012
 - No need for Renewal Ballot
 - Early Draft Review published on 8 December 2011!

Roadmap

- Java EE 7 Roadmap
 - https://blogs.oracle.com/theaquarium/entry/java_ee_7_roadmap
 - JavaEE 7 complete in Spring 2013
- JSF 2.2
 - Releasing on Java EE 7 schedule
 - Will still run on Java EE 6 containers
 - Any features that happen to depend on EE 7 will gracefully degrade.
 Example: JSR-353 JSON parsing

Questions & Answers

The preceding was intended to outline our general product direction. It is intended for information purposes only, and may not be incorporated into any contract. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, and timing of any features or functionality described for Oracle's products remains at the sole discretion of Oracle.
